Concord's heavy-duty straight drop spreader is an exceptionally versatile machine and can be used for chip spreading & sealing during the summer months and for applying ice control materials during the winter. Our hydraulic driven roller and adjustable discharge gate allow for even distribution of various materials and aggregate over the full width of the truck.

Multi-faceted and effective, Concord's Straight Drop Spreader is an ideal addition to your equipment line.

Concord's CRE-195SF "Spring Finger" model offers heavy duty spring key plates that are opened by raised tabs on the roller (see reverse side for details). These plates are individually replaceable and easily adjusted to the proper application rate with a ratcheting lever. The gate will also open fully to allow for easy clean out.

Our CRE-195SB "Solid Back" model has a spiral wrapped roller and spring loaded gate for spreading extra fine materials such as sand. The heavy-duty material roller and discharge gate are supported with external sealed ball bearings making maintenance clean and simple.
